Allowable Subject Matter

1. Claims 1,3,5,7,9-24,26-27 are allowed.

2. The following is an examiner's statement of reasons for allowance:

None of the cited references in combination with other limitations of claim teaches or suggests a power supply method that setting an output from the driver circuit to the data lines to a high-impedance state, and accumulating a charge corresponding to a charge discharged from the data lines in a parasitic capacitor of a power line of a regulator which outputs a drive power voltage to be supplied to the driver circuit, within a given period, as disclosed in independent claims 1,3,9,24. The closest art (Udo et al.) disclose related methods, either singularly or in combination fail to anticipate or suggest these limitations obvious.

None of the cited references in combination with other limitations of claim teaches or suggests a power supply method of supplying a negative voltage to a driver that setting an output from the driver circuit to the data lines to a high-impedance state, and accumulating a charge corresponding to a charge discharged from the data lines in a parasitic capacitor of a power line of a regulator which outputs a drive power voltage to be supplied to the driver circuit, within a given period, as disclosed in independent claims 10-12,26-27. The closest art (Udo et al.) disclose related methods, either singularly or in combination fail to anticipate or suggest these limitations obvious.
